

CALIFORNIA GEOLOGY

The background image of the magazine cover depicts a residential area with a significant geological hazard. In the upper portion, a two-story house with a red-tiled roof and white walls is visible. Below the house, a steep, exposed soil bank shows signs of erosion and landsliding. A green chain-link fence runs along the top of the slope, separating the property from the eroded area. The foreground is dominated by the light-brown, eroded soil of the landslide, with some sparse green vegetation and small trees growing on it. The sky is a pale, overcast blue.
